Enviro Seal 707 is a water-based alkylalkoxysilane penetrating water repellent. It is designed specifically for brick masonry, limestone, pre-cast, and concrete surfaces, including blocks where darkening is unacceptable.

Enviro Seal 707 reduces bonding of airborne hydrocarbons, reduces water damage from freeze-thaw, protects against efflorescence, and has excellent ultraviolet resistance; it is VOC (Volatile Organic Compound) compliant as well.

Applications:
- Protect all non-masonry surfaces.
- Treated surface should be free of dirt, grease, moisture, etc.
- New concrete should be allowed to cure at least 14 days before application.
- Product may be applied with low-pressure spray equipment, a brush, or a roller.
- When using low-pressure equipment, apply a light mist coating to break the surface tension; this allows for good penetration. Repeat the process with flood coat (4 to 6 inches run down).

Note:
- Air and surface temperature must be above 40° F during application.
- Caulking should be installed prior to application.
- Protect surrounding non-masonry surfaces, such as glass, aluminum, etc.
- Inadvertent splash should be removed with water before the solution has dried on the surface.
- Do not apply when rain is predicted with 24 hours.

Coverage:
- Brick Masonry: Approximately 150 - 200 square feet/gallon.
- Limestone: Approximately 100 - 150 square feet/gallon.
- Smooth (precast): Approximately 100 - 125 square feet/gallon.
- Rough Exposed Aggregate: Approximately 80 - 125 square feet/gallon.
- Block (high density): Approximately 75 - 100 square feet/gallon.
- Block (low density): Approximately 50 - 75 square feet/gallon.

HMIS Ratings:
- Health: 1
- Reactivity: 0
- Flammability: 0
- Personal Protection: 1

Caution: DO NOT alter the material as supplied. Store at room temperature (68° F).
